DETAILED ACTION

Claims 1 – 4 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 – 4 are rejected under 35 U.S.C. 102(a) as being anticipated by Tuller et al..

Tuller et al., U.S. Patent Application No. 2004/0108505 A1, discloses a ZnO system semiconductor device. As shown in Figure 4D, the system comprises an n-type layer 22 and a P-Type layer 24. The p-type layer 24 is described in paragraph [0004] as utilizing nitrogen as a dopant. Paragraph [0033] describes the growth of the ZnO in the (0001) direction. Paragraph 35 describes the growth as occurring on ZnO substrates.

Tuller does not explicitly state the concentration of the impurities in the ZnO system disclosed, and does not specify that the nitrogen concentration is 10^{20} cm⁻³ or more. However, Tuller does teach the formation of “highly p-type film”, as mentioned in the penultimate line of paragraph [0024]. Such a film would inherently have a high concentration of p-type dopant, which Tuller does teach is nitrogen.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Apostolopoulos et al., U.S. Patent Application Publication No. 2004/0207903 A1, discloses a method of inducing a periodic variation of nonlinearity in a sample of ferroelectric material.
